Tariff applied by POST Technologies for Electric Power Consumption

For some of its offers, POST Technologies provides electric power facilities to its customer and charge the consumption.

As the cost of electricity can vary according to the market, POST Technologies will update the monthly charge and perform a billing correction at the end of each year. The recalculation will be based on the difference between the estimated market value and actual average value for the past period.

Should any expected variation exceed 2%, POST Technologies will publish the revised rate in this document and apply it to monthly billing.
